ACKNOWLEDGEMENT

We would like to thank everyone who contributed to the successful completion of this project. We would like to express my gratitude to my research supervisor, Sir Muhammad Bilal for his invaluable advice, guidance, and his/her enormous patience throughout the development of the research.

In addition, we would also like to express my gratitude to our loving parents and friends who had helped and given me encouragement.

PRE-ASSESSMENT OF SOLUTIONS COMING AT YOUR DOOR-STEP

ABSTRACT

The advancement of technology has led to the development of various applications designed to improve the daily lives of people. The COVID-19 pandemic has further accelerated this trend, with many industries shifting towards online services in order to adapt to the new normal. One such industry is that of skilled trades, such as carpentry, plumbing, and electrical work. An online platform for skilled tradespeople would provide a valuable resource for both workers and customers. For skilled tradespeople, the platform could increase their visibility and accessibility to potential clients, potentially leading to more business opportunities. Customers, on the other hand, would benefit from the convenience of being able to easily find and hire skilled tradespeople from the comfort of their own homes. Overall, an online platform for skilled tradespeople could be a useful tool in today's digital age, helping to connect skilled workers with those in need of their services and potentially leading to increased business opportunities for these workers. The idea is to develop a Mobile Application which will help different workers and service providers to get the work easily and to get work based on their experience and expertise. They can also do bidding to get the job will be a great chance for them to get job based on their experience. beside this idea is to develop application for all the people who need different type of home services providers in their daily life and they have to find workers and service providers for it but most of the people faces problems in finding workers so we are building this application to solve this major problem so people can easily find workers and services providers based on the work they needed to be get done .This application will solve the problem for people who are finding service provider for their work and also solve problems of service providers who are finding some work to do but are unable to find it due to competition and contact problems . The objective of this project is to develop a home service providing Mobile Application which we have named "Solve It". This application can be used by everyone regardless. There can be two types of users who will use this application. Users can be clients as well as service providers and workers who will be offering different work to the people. It is true that pricing can be a debatable issue when it comes to finding workers to do home chores through an app or online platform. One way to potentially address this issue is by implementing a bidding system, which allows users to submit a price they are willing to pay for the services they need. This could allow users to find a suitable offer that meets their budget and needs. We have implemented this unique bidding feature in our application in order to maximize the benefits and results of our product.

Table of Contents

Declaration	i
Acknowledgement.....	iv
Abstract.....	v
List of Figures.....	ix
List of Tables.....	x
List of Symbols.....	xi
CHAPTER 1	12
1 INTRODUCTION	12
<i>1.1 Background.....</i>	<i>13</i>
<i>1.2 Problem Statements</i>	<i>15</i>
<i>1.3 Aims and Objectives.....</i>	<i>15</i>
<i>1.4 Outcome.....</i>	<i>15</i>
<i>1.5 Scope of Project.....</i>	<i>15</i>
<i>1.6 Motivations/Features/Solutions.....</i>	<i>16</i>
CHAPTER 2	18
2 LITERATURE REVIEW.....	18
<i>2.1 Existing Apps</i>	<i>18</i>
<i>2.2 Issues in Existing Apps</i>	<i>19</i>
<i>2.3 User Interface Design.....</i>	<i>20</i>
2.3.1 Section Overview.....	20
2.3.2 Interface Design Rules.....	20
<i>2.4 Screen Shots.....</i>	<i>22</i>
2.4.1 Client.....	23
2.4.2 Worker	28
CHAPTER 3	30
3 DESIGN AND METHODOLOGY	30
<i>3.1 User Classes and Characteristics.....</i>	<i>30</i>

3.2	<i>Operating Environment</i>	30
3.3	<i>Design and Implementation Constraints</i>	31
3.4	<i>User Documentation</i>	31
3.5	<i>Assumptions and Dependencies</i>	31
3.6	<i>Program Structure</i>	32
3.6.1	Working structure of client.....	32
3.6.2	Working structure for worker.....	32
3.7	<i>Diagrams</i>	33
CHAPTER 4		42
4 IMPLEMENTATION		42
4.1	<i>Hardware Interfaces</i>	42
4.2	<i>Software Interfaces</i>	42
4.3	<i>Communications Interfaces</i>	42
4.4	<i>System Features</i>	42
4.4.1	Login/Signup.....	43
4.4.2	Map Range:.....	43
4.4.3	Progress Portal:.....	44
4.4.4	Equipment Space Area.....	44
4.4.5	Bidding System.....	45
4.5	<i>Other Nonfunctional Requirements</i>	45
4.5.1	Performance Requirements.....	45
4.5.2	Safety Requirements.....	45
4.5.3	Security Requirements.....	45
4.5.4	Software Quality Attributes.....	46
4.5.5	Business Rules.....	46
4.5.6	Other Requirements.....	46
4.6	<i>Analysis Models</i>	47

CHAPTER 5	49
5 RESULTS AND DISCUSSIONS.....	49
5.1 <i>Reuse and relationships to other products</i>	49
5.2 <i>Design decisions and tradeoffs</i>	49
5.3 <i>Pseudocode for components</i>	49
5.3.1 Sign up.....	49
5.3.2 Login.....	50
5.3.3 Forgot password.....	50
5.3.4 Account settings.....	51
5.3.5 Adding a job:.....	51
5.3.6 Bidding:.....	51
5.3.7 Updating Progress:.....	51
5.3.8 Equipment Update:.....	51
