

Abstract

This study is designed to know if there are any significant differences among the Stockholder wealth of bonus paying and non-bonus paying banks in Pakistan. Regression analysis is used to analyze the data which has been collected from the annual statements of the banks involved. I have used 10 private and 4 public sector banks for the study. The results show that the ratio of current to recorded value of the equity of bonus paying and not bonus paying banks differ significantly in Pakistan. On the other hand there is no major difference found between Stockholder wealth of bonus paying and non-bonus paying banks of Pakistan.

ACKNOWLEDGMENT

Thanks to the Almighty Allah for enabling we to fulfill the requirements for completion of our dissertation .It could not be a justice in presenting this project without mentioning the people around us who has been inextricably related with the completion of this project, for assisting us in all respects and regards to complete this project. Our heartfelt thanks to our teacher Sir Shehzad Butt who enriched us with wealth of knowledge that led ideas to pursue and power of writing this project.

It is also a great pleasure to record honorable regards to all those who helped us .I learn a lot in developing this project.

Finally, for all possible errors, emotions and shortcomings in the writing of this project, only we are responsible for which we hope that all covering regards of this project will forgive us.
